

# Adaptive Management

How are we doing?

# Why adaptive management?

1. accountability
2. ecosystem management
3. learning

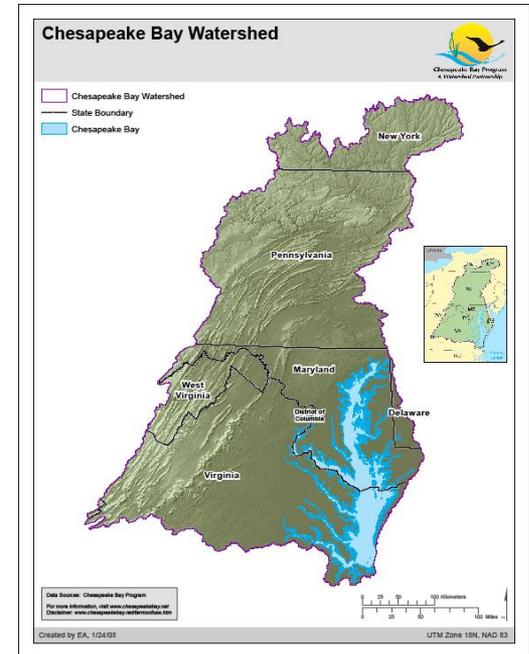

# accountability

- **What** are we doing
- **Why** we are doing it
- **How** we expect the system to respond
- **When** we will assess our understanding

Ultimately:

**The reason for continuing or changing a strategy**

# ecosystem management

- consideration of the entire socio-ecological system
  - factors affecting outcomes = model of the system
  - factors now include people
- emerging ecosystem based management
  - cross-GIT coordination

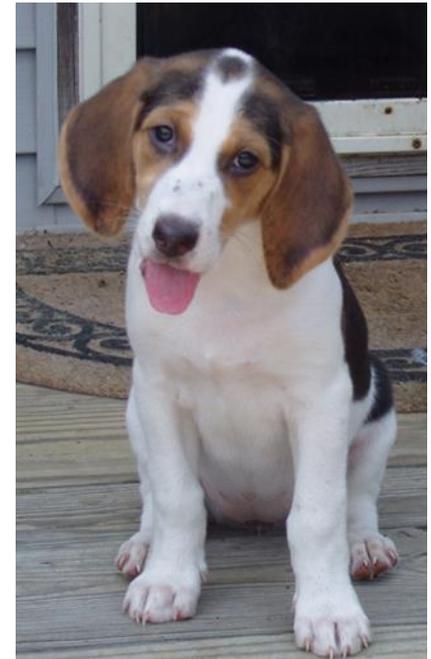

# learning

## more efficient & more effective

- appropriate goals (and outcomes)
  - managing in an evolving system
- identifying all factors
  - remembering people
- focusing on gaps
  - targeting program efforts
- discovering what works

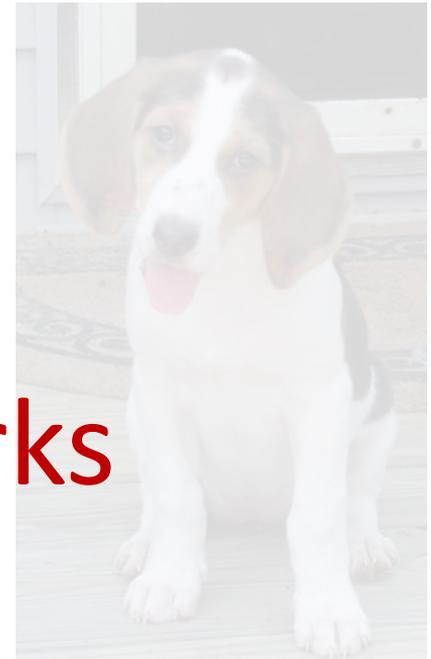

# learning

more efficient & more effective

- appropriate goals (and outcomes)
  - managing in an evolving system
- identifying all factors
  - remembering people
- focusing on gaps
  - targeting program efforts

discovering what works

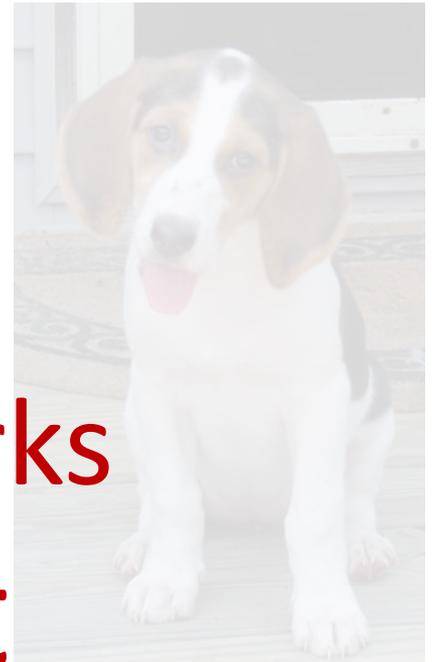

# learning

more efficient & more effective

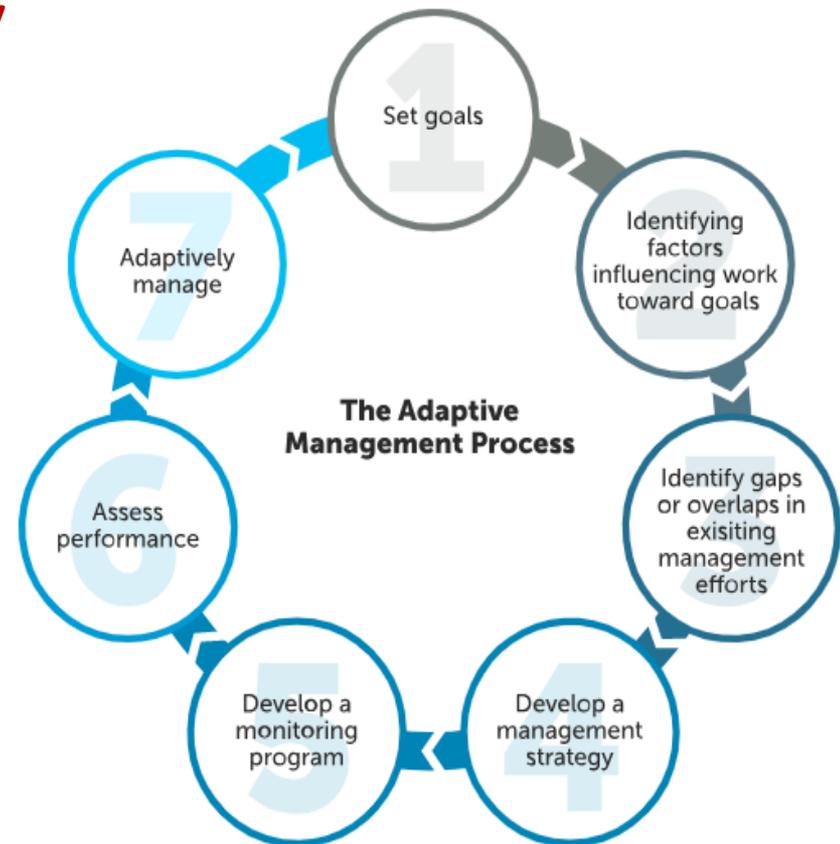

- appropriate goals (and outcomes)
  - managing in an evolving system
- identifying all factors
  - remembering people
- focusing on gaps
  - targeting program efforts

discovering what works  
then acting on it

# Why adaptive management?

1. accountability
2. ecosystem management
3. learning
