# Outline:

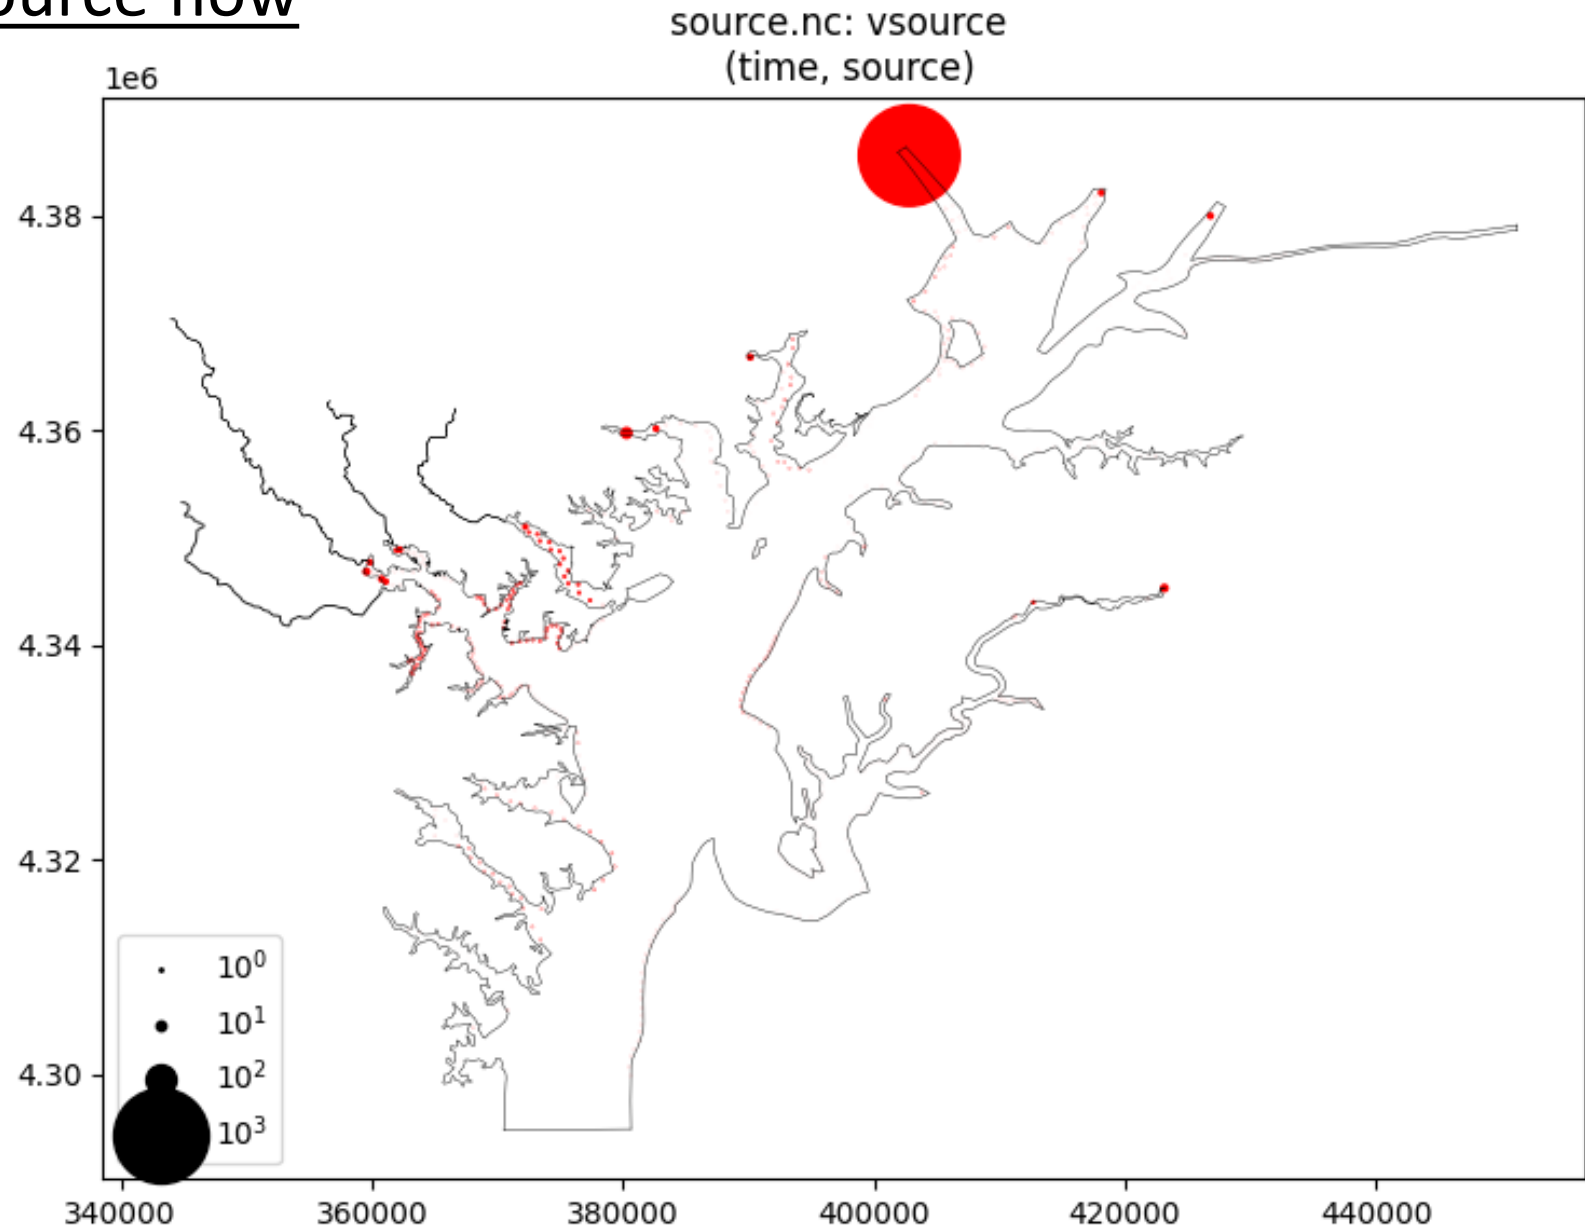

- I. Characterization of phase-7 non-point source loading
- II. SCHISM-ICM Water quality modeling results
- III. Dissolved oxygen in Patapsco River (Jeremy Testa)
- IV. Summary and discussion

## WT5.1

# I. Characterization of Phase-7 Non-point Source Loading

## I-1 Non-point source flow

## I-2 Non-point source concentration

Within the source.nc input file msource initial condition -- List of 23 variables:

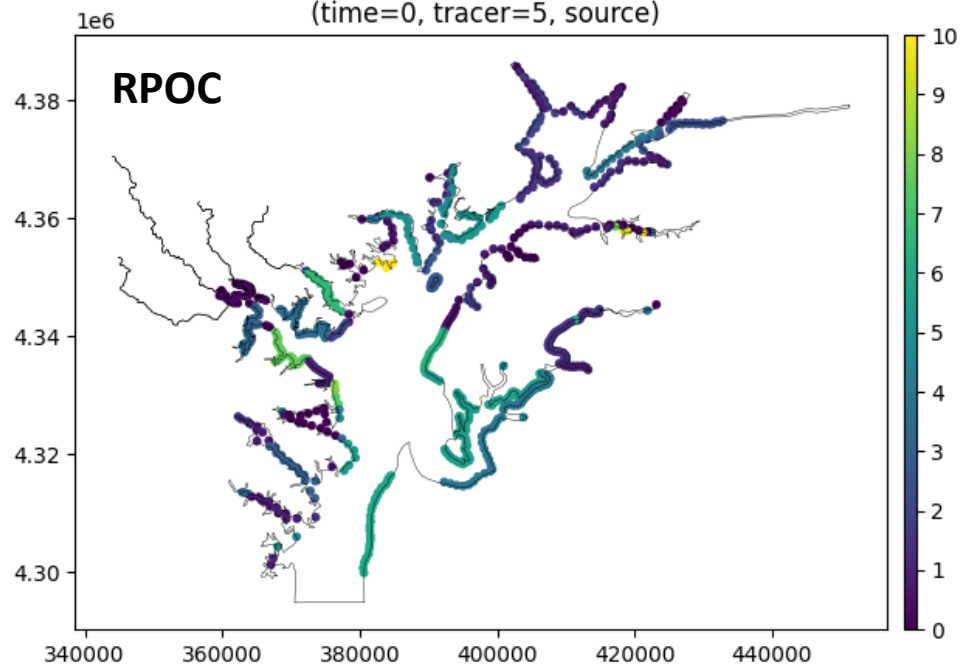

- |   |  |
|---|--|
| 1. Temperature                                    | 13. NO3 (Nitrate Nitrogen)                                 |
| 2. Salinity                                       | 14. RPOP (Refractory Particulate Organic Phosphorus)       |
| 3. PB1 (Diatom)                                   | 15. LPOP (Labile Particulate Organic Phosphorus)           |
| 4. PB2 (Green Algae)                              | 16. DOP (Dissolved Organic Phosphorus)                     |
| 5. PB3 (Cyanobacteria)                            | 17. PO4 (Total Phosphate)                                  |
| 6. RPOC (Refractory Particulate Organic Carbon)   | 18. COD (Chemical Oxygen Demand)                           |
| 7. LPOC (Labile Particulate Organic Carbon)       | 19. DOX (Dissolved Oxygen)                                 |
| 8. DOC (Dissolved Organic Carbon)                 | 20. SRPOC (Slow Refractory Particulate Organic Carbon)     |
| 9. RPON (Refractory Particulate Organic Nitrogen) | 21. SRPON (Slow Refractory Particulate Organic Nitrogen)   |
| 10. LPON (Labile Particulate Organic Nitrogen)    | 22. SRPOP (Slow Refractory Particulate Organic Phosphorus) |
| 11. DON (Dissolved Organic Nitrogen)              | 23. PIP (Particulate Inorganic Phosphate)                  |
| 12. NH4 (Ammonium Nitrogen)                       |  |

**COD = 0 everywhere**

## Comments:

1. No source information from Hart-Miller Island (yet Pooles Island does)
2. No Source information from C&D canal (beyond MD portion)

# Temporal variation (for nitrogen and phosphorus loading)

Susquehanna River (X axis = time in days; Y axis = g/m<sup>3</sup>)

# Susquehanna River

X axis = time in days

Y axis = g/m<sup>3</sup>

# Susquehanna River

X axis = time in days

Y axis = g/m<sup>3</sup>

## Comments:

1. Do 1994 and 1996 increase of TN and TP concentration verified?

# II.. SCHISM-ICM Water Quality Modeling Results

## Dissolved Oxygen

— modeled  
● observed

### III.. Dissolved Oxygen in Patapsco River

(To be presented by Dr. Jeremy Testa)

## IV. Summary and Discussion

1. The Phase-7 non-point source load was successfully linked to the Patapsco/Back MTM SCHISM-ICM model
2. The non-point source spatial distribution indicated that no source information from Hart-Miller Island (yet Pooles Island does) and C&D canal (beyond MD portion). Temporal distribution pointed a sudden increase of TN and TP in 1994 and 1996.
3. Overall, the skills for water quality modeling results are satisfactory given the LPON + SRPON and LPOP + SRPOP be excluded from TN and TP calculation.
