

1. How interested and excited are you in trying to enhance the stream health monitoring network ?

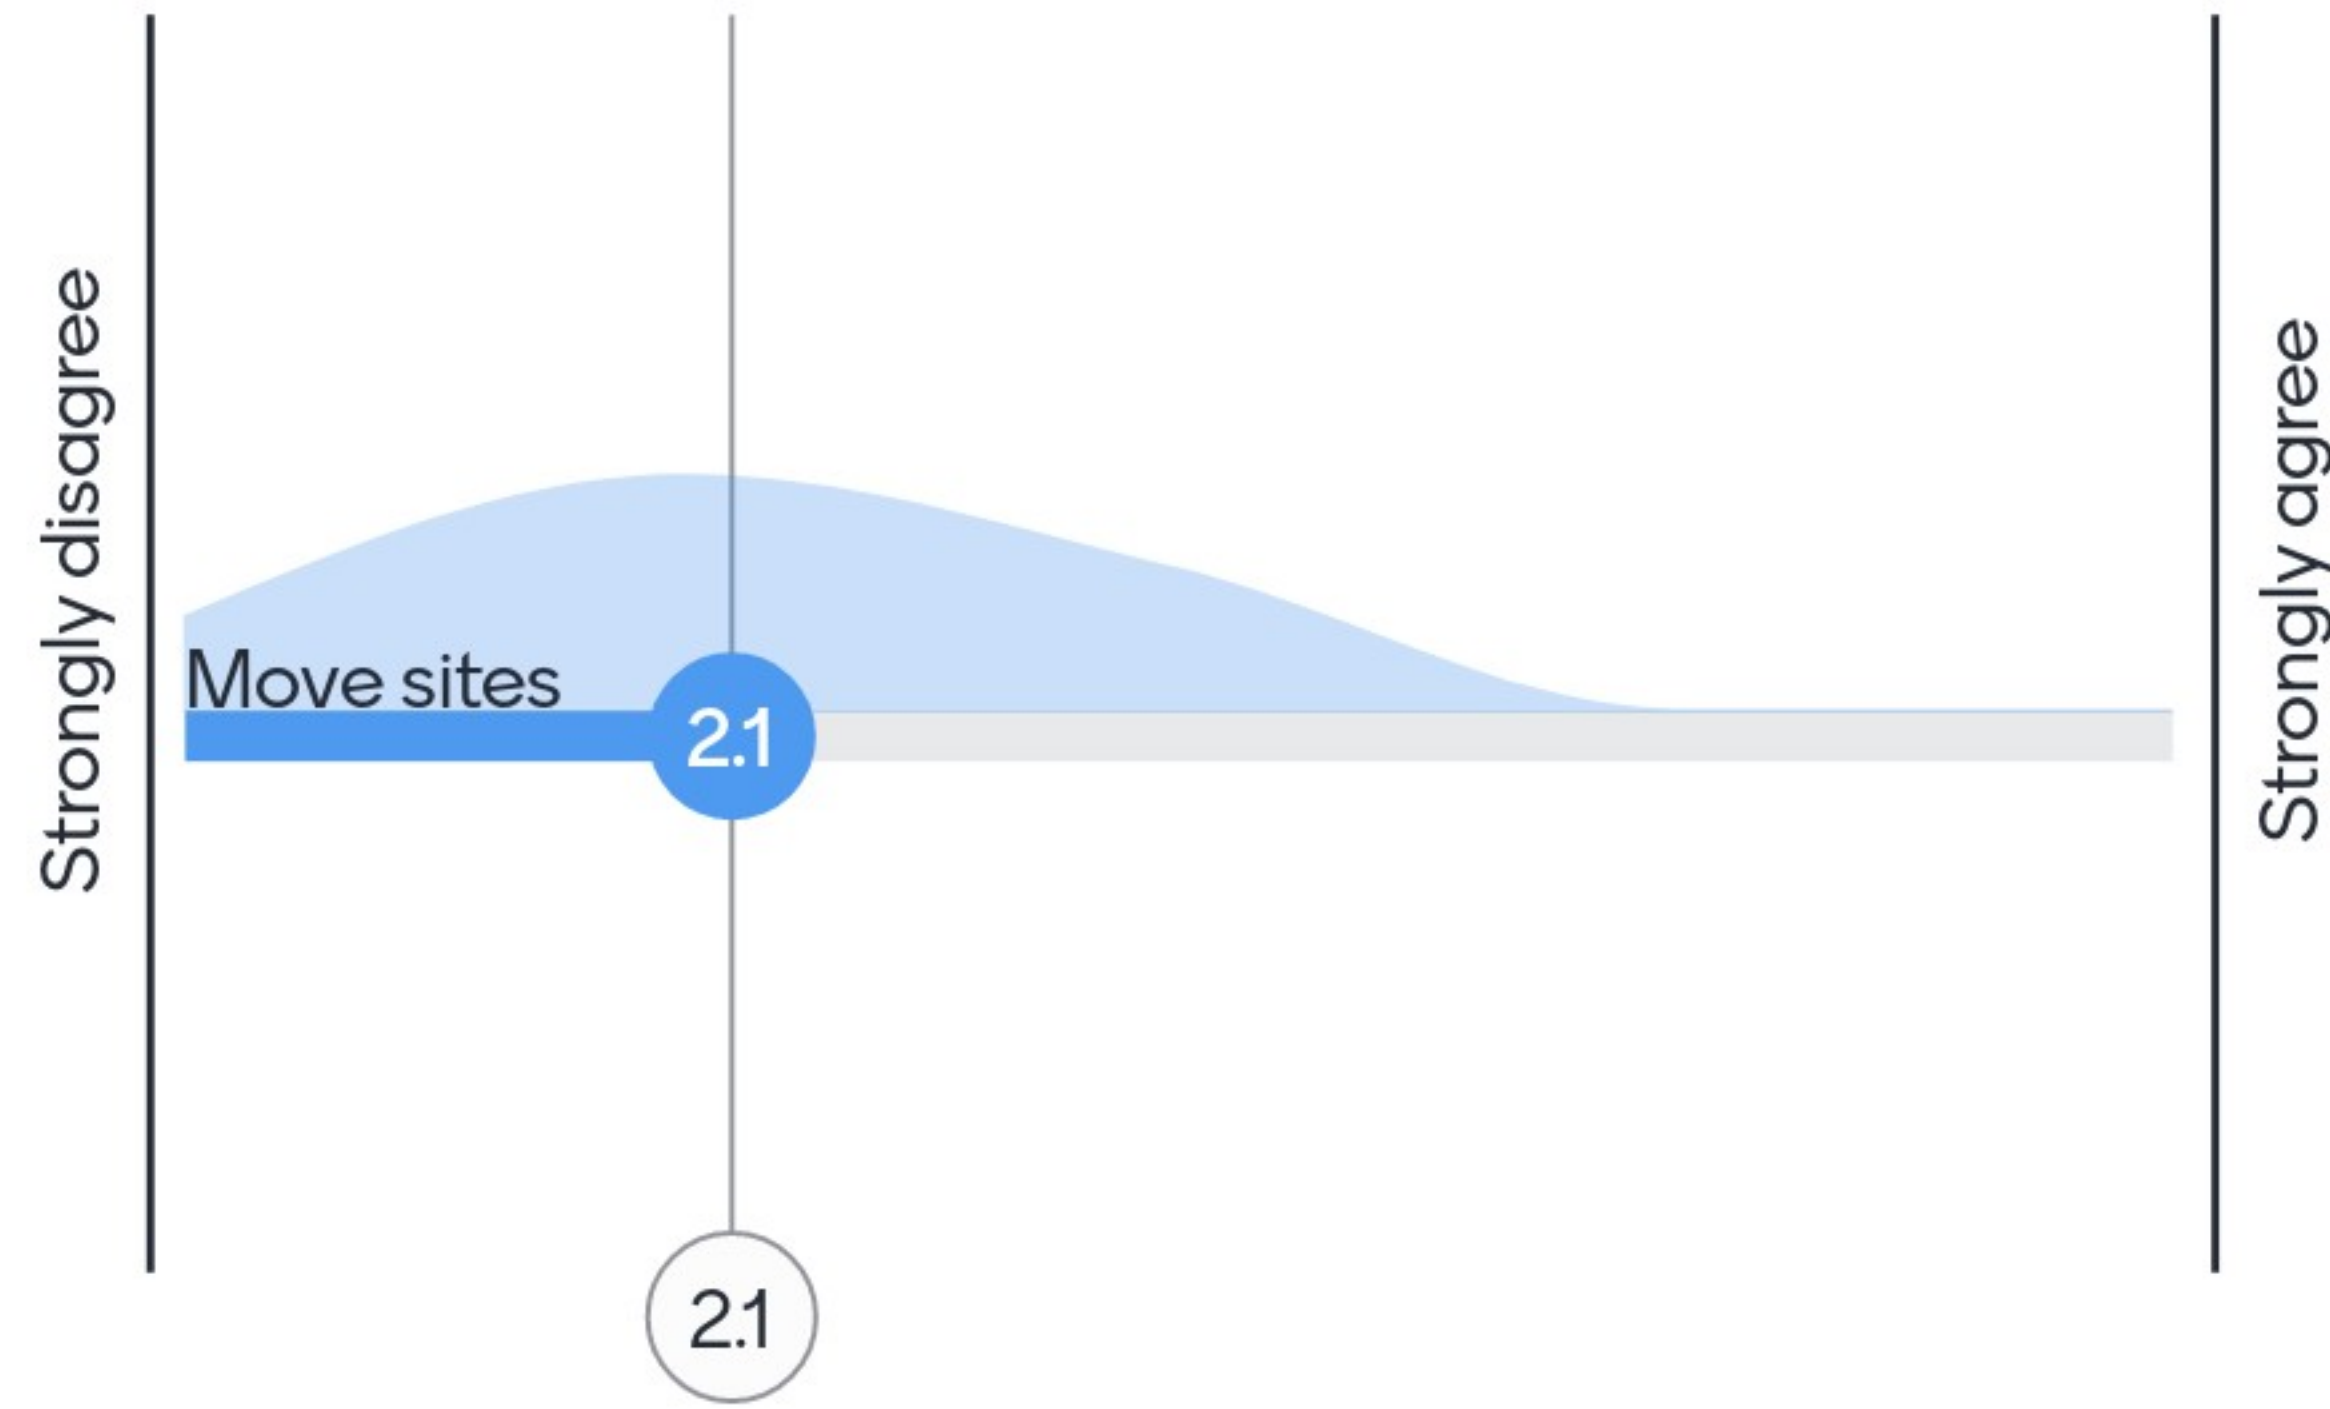

2. Would you be excited to participate in a multi-day workshop, devoting time in SHWG, or another approach?

3. Would your agency/jurisdiction/organization be likely to add new monitoring sites in the years to come?

4. Would your agency/jurisdiction/organization be likely to add new move monitoring sites in the years to come?

5. What other feedback on the idea of enhancing the monitoring network should we be thinking about?

providing staff support to jurisdictions to conduct monitoring

Excited to enhance our monitoring network in the Chesapeake region and how volunteer monitoring can play a critical role in that.

Consider comparisons of field methods and how similar/different they are.

Keep in mind some programs employ probability-based sampling, so sites are not necessarily fixed each year (or round) of sampling

my organization would likely need funding to have samples analyzed/identified

focus on supporting existing programs rather than starting a new program

Data Standardization / Database Consolidation

What research question(s) are we trying to address? This is important when asking about monitoring. (sorry I missed the beginning slides)
