

**Reaching 2025 Team**  
**April 27, 2023**  
**3:00-4:00 p.m.**

## **Agenda**

**Meeting Outcome:** Develop a list of information that is relevant to include in the Bay TMDL/water quality portion of the Reaching 2025 report for the Executive Council.

2:00-2:05      Welcome and Agenda Review  
(Sean Corson, NOAA)

2:05-2:10      Schedule Review  
(Rachel Felver, ACB)

2:10-2:25      Follow-up on Bay TMDL and water quality brainstorming (ALL)

Notes from 4/21 Meeting on what should be included:

- Pull relevant information from SRS Lessons Learned document.
- Integrate three issues raised to the PSC regarding CAST.
- Consider themes and recommendations in the settlement.
- Highlight successes with point source controls.
- Potential recommendation could deal with the challenges related to the awarding of grants and the lag time in getting practices on the ground.

2:25- 2:55      Brainstorming on new science and monitoring  
(ALL)

The EC charge states, "The PSC is to report back to the Executive Council at our 2023 annual meeting with recommendations on how to best address and integrate new science and restoration strategies leading up to 2025."

Examples of new science and monitoring developments that have or will emerge prior to 2025: CESR report, tributary models, 4-D interpolator, high-resolution land cover/land use data and change tool, hypoxia.

Questions to Guide our Discussion:

- What new science and monitoring developments should be considered now to help progress outcomes to 2025?
- How have we already been using some of these emerging tools to further progress (e.g., high-resolution land cover and land use is informing the Land Use Methods and Metrics and Tree Canopy outcomes).
- What other monitoring and science developments should be considered, that are not listed above, to help progress to 2025?
