

Fish Habitat Outcome Language Guiding Questions:

1. What is the scope of the outcome, keeping in mind it should be practical/achievable and measurable? (e.g. tidal shallow water)
2. How are we defining fish habitat?
3. Do we have priority habitats and stressors to focus on? (e.g. striped bass spawning areas & factors affecting productivity/ recruitment)
4. What do the recent science reports tell us about how habitat is changing, key drivers, the impacts on fish, management options and science gaps?
5. How do these findings factor into our outcome drafting?
6. What are the connections between fish habitat and the CBP? What other GITs do we need to consider in drafting an outcome and receiving support for implementation?
7. What role might commercial and recreational fishing play in a fish habitat outcome?
