GIT Chairs Key Takeaways: Goal Structure

▪We liked all the models (many commonalities, not really new) – these <u>organizational models</u> can work for the partnership, but <u>they can also fail if we don't work effectively across outcomes</u>

▪Need a clear plan for <u>topics that span across outcomes</u> such as changing environmental cond.

▪For topics with an existing community of practice – we want to continue to enhance collaboration. However, don't diminish activities with a reorganization of outcomes and teams. <u>Improve collaboration, but don't break what's working</u>.

▪Focus on 'How we work' vs. 'What we bin together' – For <u>operational models</u> - form follows function, operational streamlining (joint meetings, topical discussions, geographic case studies, routine meeting read-outs), <u>support partners with more limited capacity</u>.

▪Continue to <u>identify strategies to increase efficiency</u> – don't just reduce the number of outcomes
