

# THE CHESAPEAKE HEALTHY WATERSHEDS ASSESSMENT

What exactly is it and how can it help other  
Chesapeake Bay Program Outcomes?

Goal: Sustain state-identified healthy waters and watersheds recognized for their high quality and/or high ecological value

Outcome: 100 percent of state-identified healthy waters and watersheds remain healthy.

## HEALTHY WATERSHEDS GOAL

*Sustain watershed health where it is high, exceptional and/or outstanding...*

*to increase the number of healthy watersheds in the future...*

*Provide the forum for mutual shared learning...*

*Develop information resources...*

*and*

*Promote the science*

HEALTHY  
WATERSHEDS  
VISION

# WHAT IS A STATE-IDENTIFIED HEALTHY WATERSHED?

How are they defined, and what  
information is missing?

# STATE METRICS

## Pennsylvania

- Benthic macroinvertebrate community
- Located in designated state or national protected, owned, or managed areas
- Designated wilderness trout stream by the Fish and Boat commission
- Chemical data such as DO, toxics, pH

## Virginia

- INSTAR-Interactive stream assessment resource, index of biotic integrity
- Data on fish and macroinvertebrate communities, instream and riparian habitat
- High numbers of native/broad diversity of species, few or no non-native aquatic species, few generalist species

# STATE METRICS

## Maryland

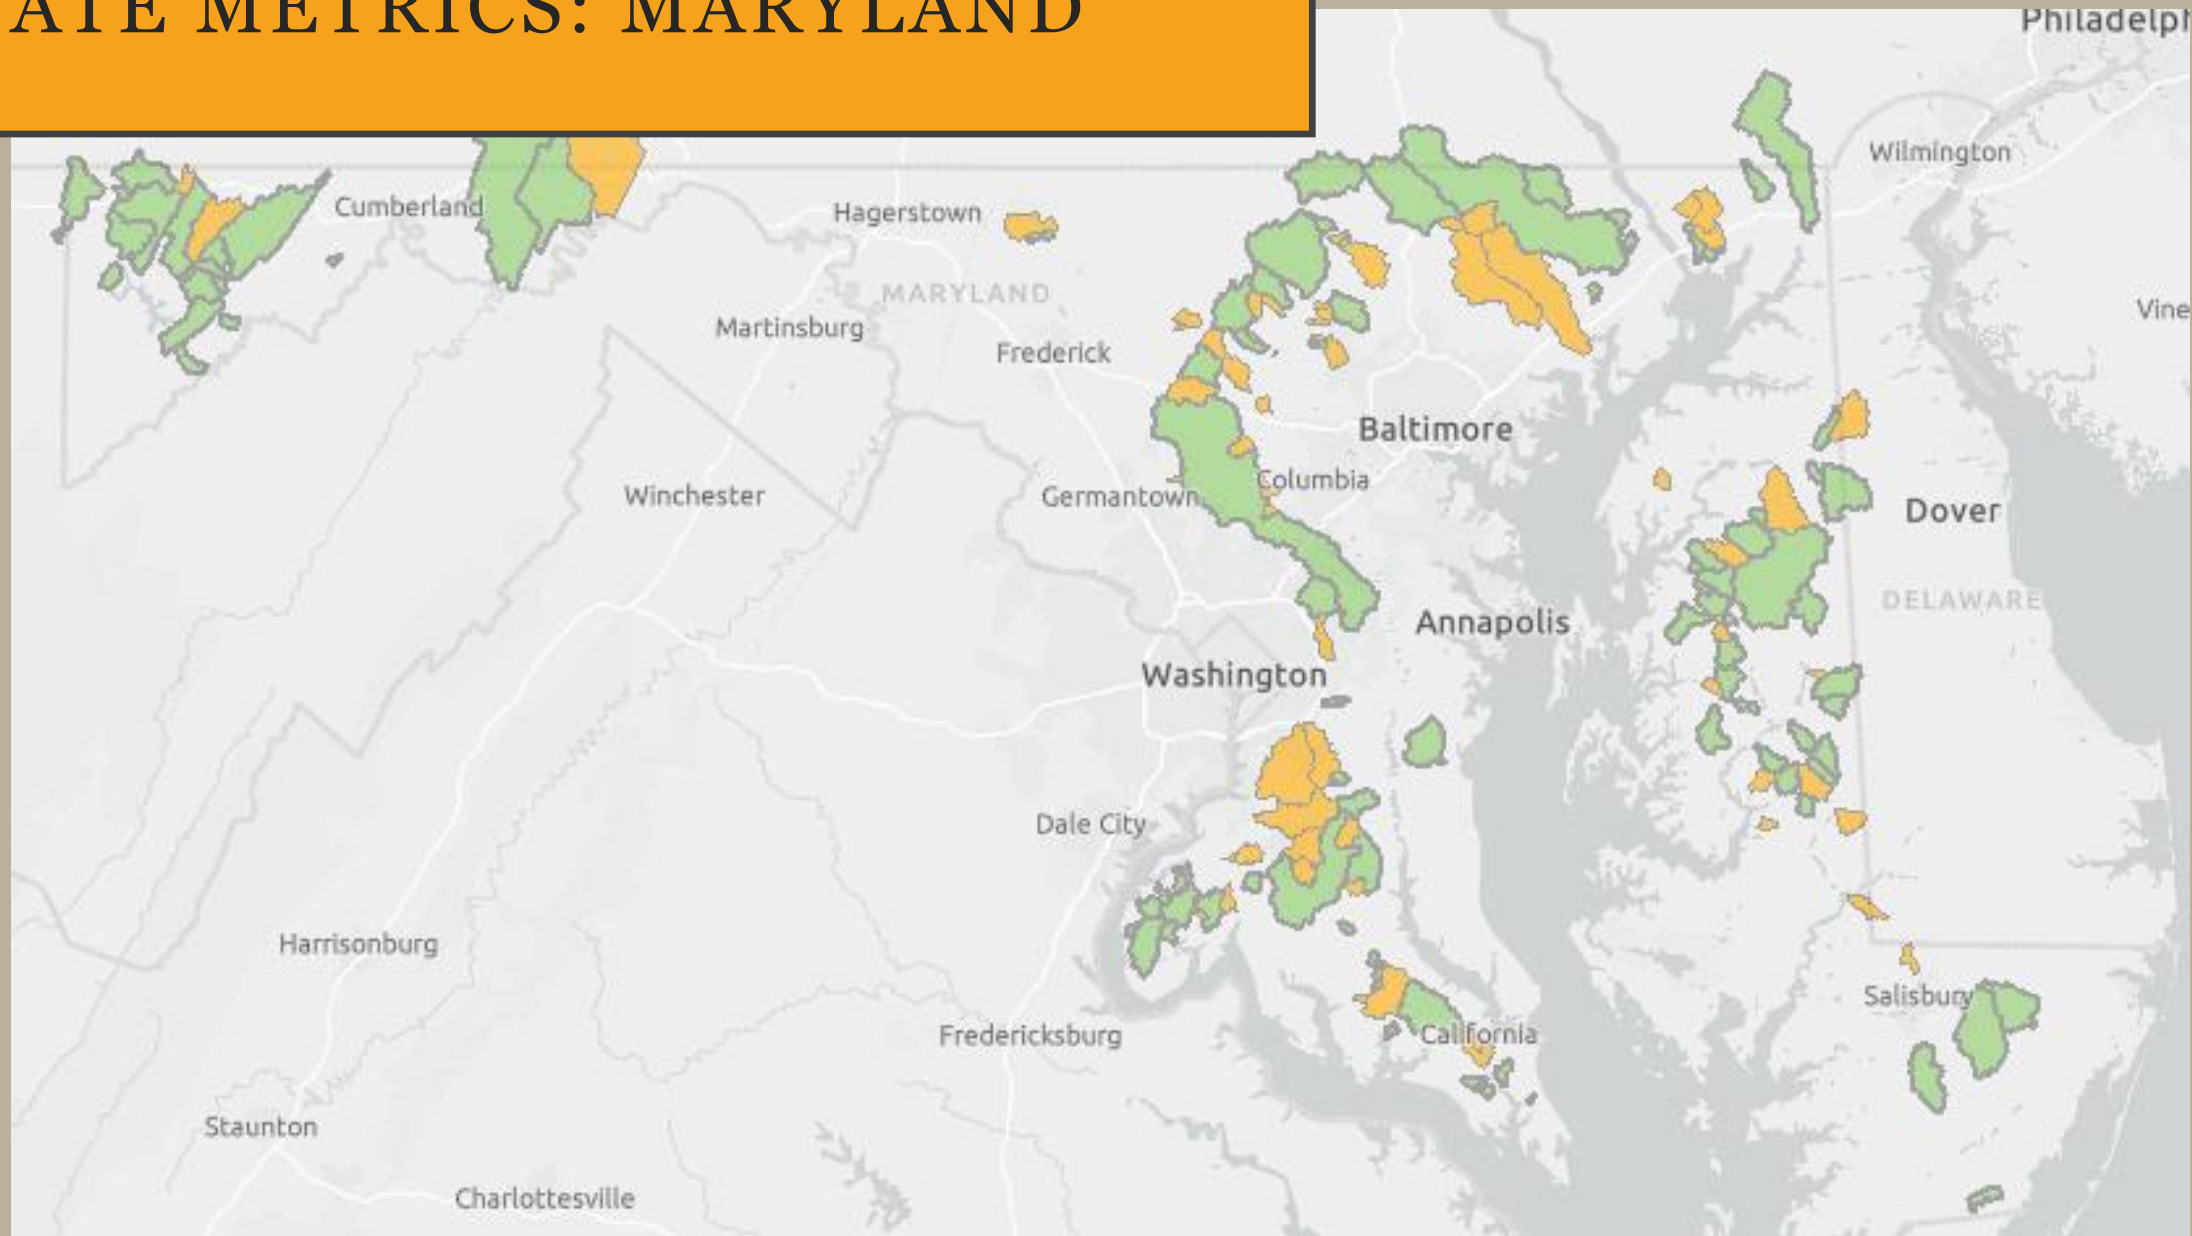

- Tier II streams are identified according to fish and benthic indices of biotic integrity
- Based on data collection and analysis from Maryland Biological Stream Survey (MBSS) Protocols
- Tier II streams are grouped into catchments and those with Assimilative Capacity, or the natural capacity of a water body to dilute and absorb pollutants

## West Virginia

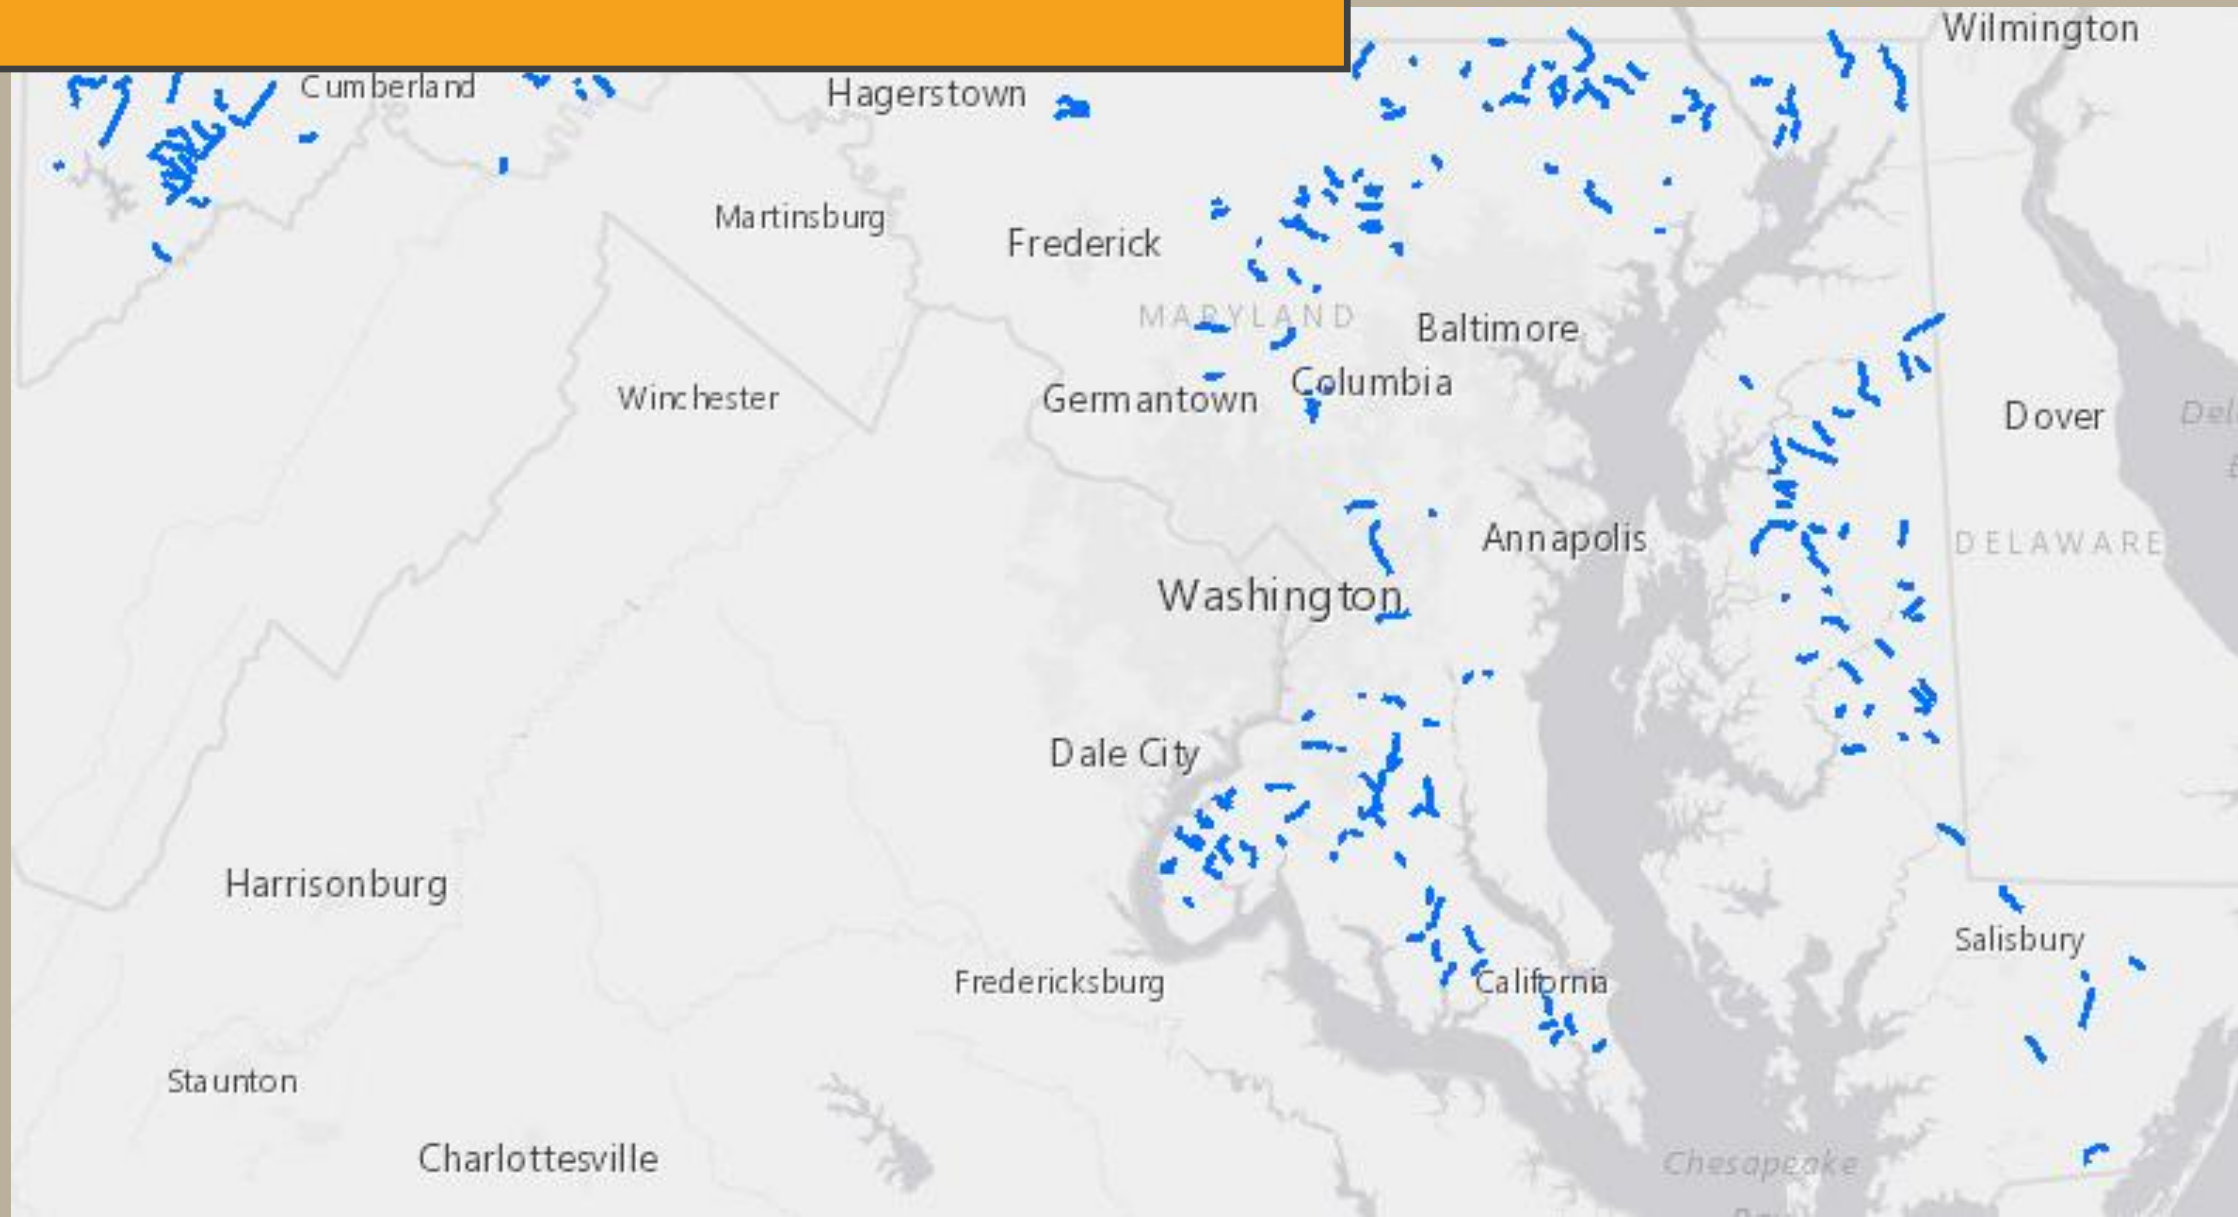

- No state-defined “healthy watersheds”
- Known as Tier 3: “outstanding national resource waters”
- Have exceptionally high benthic macroinvertebrate communities
- Located in Federal Wilderness areas, state and national parks, national forests, and protected by the Wild and Scenic Rivers Act
- Naturally reproducing trout streams

Landscape Condition

Hydrology

Geomorphology

Habitat

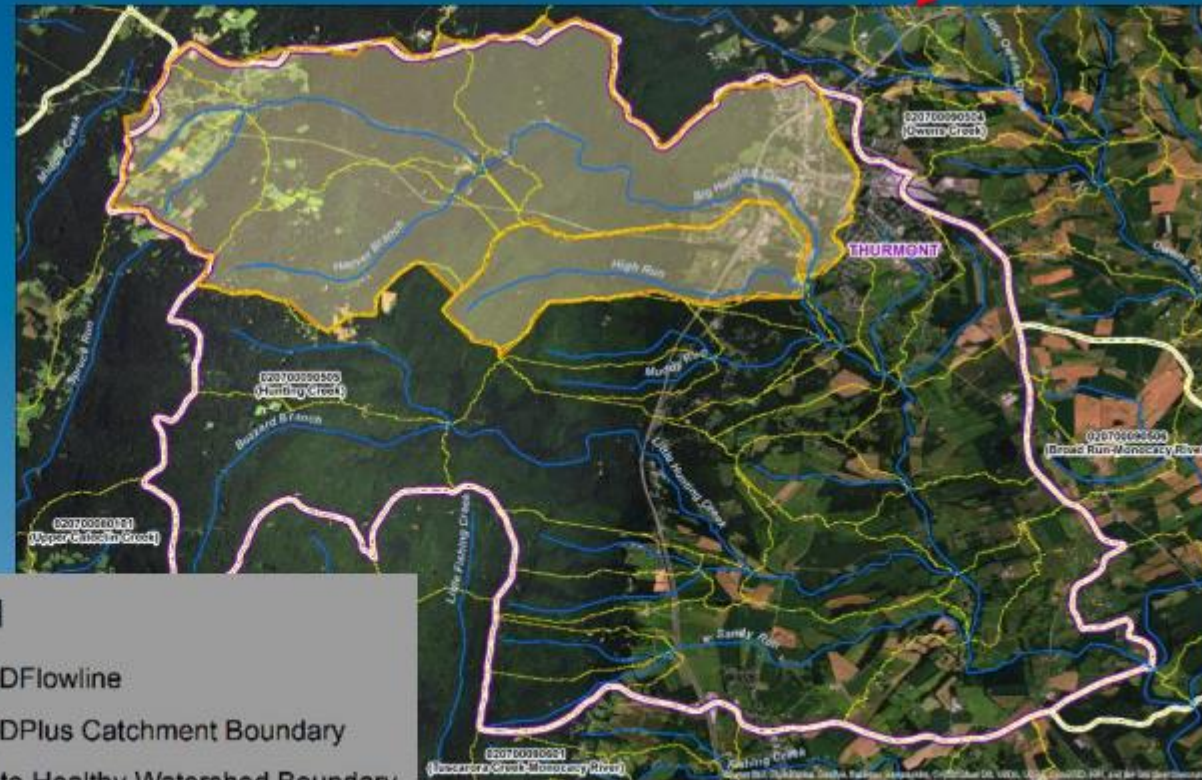

Biological Condition

Water Quality

# Addressing Watershed Scale

- PHWA developed nationally to provide data at HUC12 scale; this regional application required finer scale
- Developed metrics at NHDPlus catchment scale
- Calculated for all 83,623 catchments in Chesapeake watershed (average area  $\sim 2 \text{ km}^2$ )

## Legend

- NHDFlowline
- NHDPlus Catchment Boundary
- State Healthy Watershed Boundary
- HUC-12 Boundary

# Chesapeake Bay Watershed Health Index \*\*DRAFT\*\*

## Landscape Condition

% Natural Land Cover (Ws) \*

% Forest in Riparian Zone (Ws) \*

Population Density (Ws)

Housing Unit Density (Ws)

Mining Density (Ws)

% Managed Turf Grass in Hydrologically Connected Zone (Ws) \*

Historic Forest Loss (Ws)

## Hydrology

% Ag. On Hydric Soils (Ws)

% Forest (Ws) \*

% Forest Remaining (Ws)

% Wetland Remaining (Ws)

% Impervious Cover (Ws) \*

Road Stream Crossing Density (Ws)

% Wetlands (Ws) \*

## Geomorphology

Dam Density (Ws)

% Vulnerable Geology (Ws)

Road Density in Riparian Zone (Ws)

% Impervious in Riparian Zone (Ws) \*

## Habitat

NFHP Habitat Condition Index (Catchment)

Chesapeake Bay Conservation Habitats (Catchment)

## Biological Condition

Outlet Aquatic Condition Score, 2016 (Catchment)

## Water Quality

% of Stream Length Impaired (Catchment)

Estimated Nitrogen Loads from SPARROW Model (Ws)

N, P, and Sediment Loads from Chesapeake Bay Model, by Sector (Ws)

Original PHWA Metrics

New Metrics

Customized using Chesapeake Bay high-resolution land use/cover data

Note: All metrics calculated at NHDPlus catchment scale

Ws = Metric value calculated for entire upstream watershed

HOW DOES THIS HELP OTHER  
OUTCOMES?

## CLIMATE RESILIENCY GOAL

- Increase the resiliency of the Chesapeake Bay watershed, including its living resources, habitats, public infrastructure and communities, to withstand adverse impacts from changing environmental and climate conditions.

# CLIMATE RESILIENCY OUTCOMES

- *Monitoring and Assessment Outcome :*
- Continually monitor and assess the trends and likely impacts of changing climatic and sea level conditions on the Chesapeake Bay ecosystem, including the effectiveness of restoration and protection policies, programs and projects.

## CLIMATE RESILIENCY OUTCOMES

- *Adaptation Outcome:*
- Continually pursue, design and construct restoration and protection projects to enhance the resiliency of Bay and aquatic ecosystems from the impacts of coastal erosion, coastal flooding, more intense and more frequent storms and sea level rise

## HOW CAN CLIMATE RESILIENCY AND HEALTHY WATERSHEDS WORK TOGETHER?

- Lack of Collaboration
- Promoting the utilization of “climate-smart” decisions making tools and products
- Lack of capacity to monitor long term the success of climate resiliency indicators

## HOW CAN CLIMATE RESILIENCY AND HEALTHY WATERSHEDS WORK TOGETHER?

- Lack of Collaboration
- Promoting the utilization of “climate-smart” decisions making tools and products
- Lack of capacity to monitor long term the success of climate resiliency indicators

- Introducing a new management activity focused on collaboration
- Apply Chesapeake Bay Climate Smart Framework in coordination with new GITs
- Tracking indicators as a measure of progress

An aerial photograph showing a dark, winding river or stream cutting through a vast, dense green forest. The forest is composed of many tall, thin trees, creating a textured canopy. The river meanders from the bottom left towards the top right, eventually merging into a larger body of water on the right side of the frame. The overall scene is lush and vibrant, with various shades of green dominating the landscape.

# *Collaboration, Cooperation, and Integration*
