

Stats on Updates made in the Editor Tool

- 1069 total records in the Federal Facilities layer, which may include some overlap/duplicates.
- 114 records were edited. It's possible that more records were reviewed and intentionally left unchanged, but there is no way of knowing that.
- 100 of those records had their land use percentages edited (the other 14 records were presumably reviewed and had notes/corrections added/edited).
- Among the 114 edited records, there are 94 unique facility names (a single facility may be divided into more than one polygon record).

Breakdown of Edited Records by Agency

- DOD (54 records edited)
- GSA (3 records edited)
- NASA (2 records edited)
- NPS (31 records edited)
- USDA (2 records edited)
- USFWS (22 records edited)

- Could reopen the Federal Facility Editor tool until the week of Thanksgiving, if necessary.
- New default values have been approved by the Land Use Workgroup for increased accuracy with federal facilities:
 - Facilities greater than 10 acres: 100% mixed open
 - Facilities less than or equal to 10 acres: 70% turf grass, 30% mixed open
