

Updated stats following the re-opening of the tool in November

- There were an additional six records edited in November, four of which had their land use edited.
- There are 1060 total records in the Federal Facilities layer, which may include some overlap/duplicates. This number has decreased as Renee has removed some duplicate records.
- 120 records were edited. It's possible that more records were reviewed and intentionally left unchanged, but there is no way of knowing that.
- 104 of those records had their land use percentages edited (the other 16 records were presumably reviewed and had notes/corrections added/edited).

Breakdown of edited records by agency:

- DOD (57 records edited)
- GSA (3 records edited)
- NASA (2 records edited)
- NPS (31 records edited)
- USDA (2 records edited)
- USFWS (23 records edited)
