Challenges and Directions for the Advancement of Estuarine Ecosystem Science

**Jeremy M. Testa, W. Michael Kemp,
Lora A. Harris, Ryan J. Woodland &
Walter R. Boynton**

"We argue that such an applied science framework constrains and defines many of the most important scientific questions in estuarine ecosystems, driving our field to greater clarity and more insightful research with greater potential for societal relevance."

“This science-management relationship needs to be elevated beyond “service-to-society,” acknowledging the transformative ways in which applied research may spark creativity and inform theoretical advances in basic estuarine science.”

NRC (2000):

- A reasonably accurate model accessible to managers to predict nutrient loads
- Simple frameworks for characterizing estuarine response

Project Objectives

Develop novel, management-focused models:

- Watershed loading model (NLM)
- Lagoon ecosystem model (LEM)
- Virtual eelgrass meadow (VEM)

To ...

- Quantify changes in TN loads under changing land use, population, agricultural activities, and BMPs.
- Model lagoon response to these loads coincident with climate change – focus on water quality and seagrass habitat.
- Provide the models for direct use by regional stakeholders.

[Introduction](#)

Welcome to the demonstration website for the VIMS Delmarva Coastal Bays Model. This demonstration version of the model is provided for illustration only; the model and online interface are currently undergoing revision with expected completion in Jan 2015.

Model output is to be regarded as preliminary at this point as this tool is under ongoing development and should not yet be used to inform management. Use the navigation buttons to the right to move through the tool. The following pages provide background on the model and allow the user to perform simulations related to nutrient loading.

Contact for questions:
Dr. Mark J. Brush

Coupled NLM-LEM: New Online Interface

Delmarva Coastal Bays Model
beta version

Previous Page

Scenario Simulations (Page 1 of 3):

This model allows the user to manipulate watershed characteristics and resulting nutrient loading by either
(1) using the slider below to directly change loads of N and P (as a multiplier of the current loads), or
(2) proceeding to the next two pages to alter watershed characteristics (e.g., population size, land use).

You may also increase/decrease water temperature using the second slider below (as an additive change to current temperatures. Click the "U" in the upper left corner of the sliders to restore default values.

When finished making changes, return to this page and press "Run". The model will take a few minutes to run. When finished, computed watershed TN loads (including direct atmospheric deposition to each coastal bay) will be shown in the table below. Click the Export button to copy the loads to your clipboard for pasting into a spreadsheet program. Lagoon model output will be displayed on the following pages.

Watershed Load Multiplier

Conceptual Model **Processes**

Managers and Stakeholders in the Delmarva were interested in participating at multiple levels of model development, parameterization, and testing. They were keen proponents of simple, accessible models that met their needs!

Formulations **Parameter values**

2017 BOCC Presentation - Calvert County

1987
Average Bottom Water Dissolved Oxygen

Legend

☆ Sampling Station

Bottom Water DO mg/L

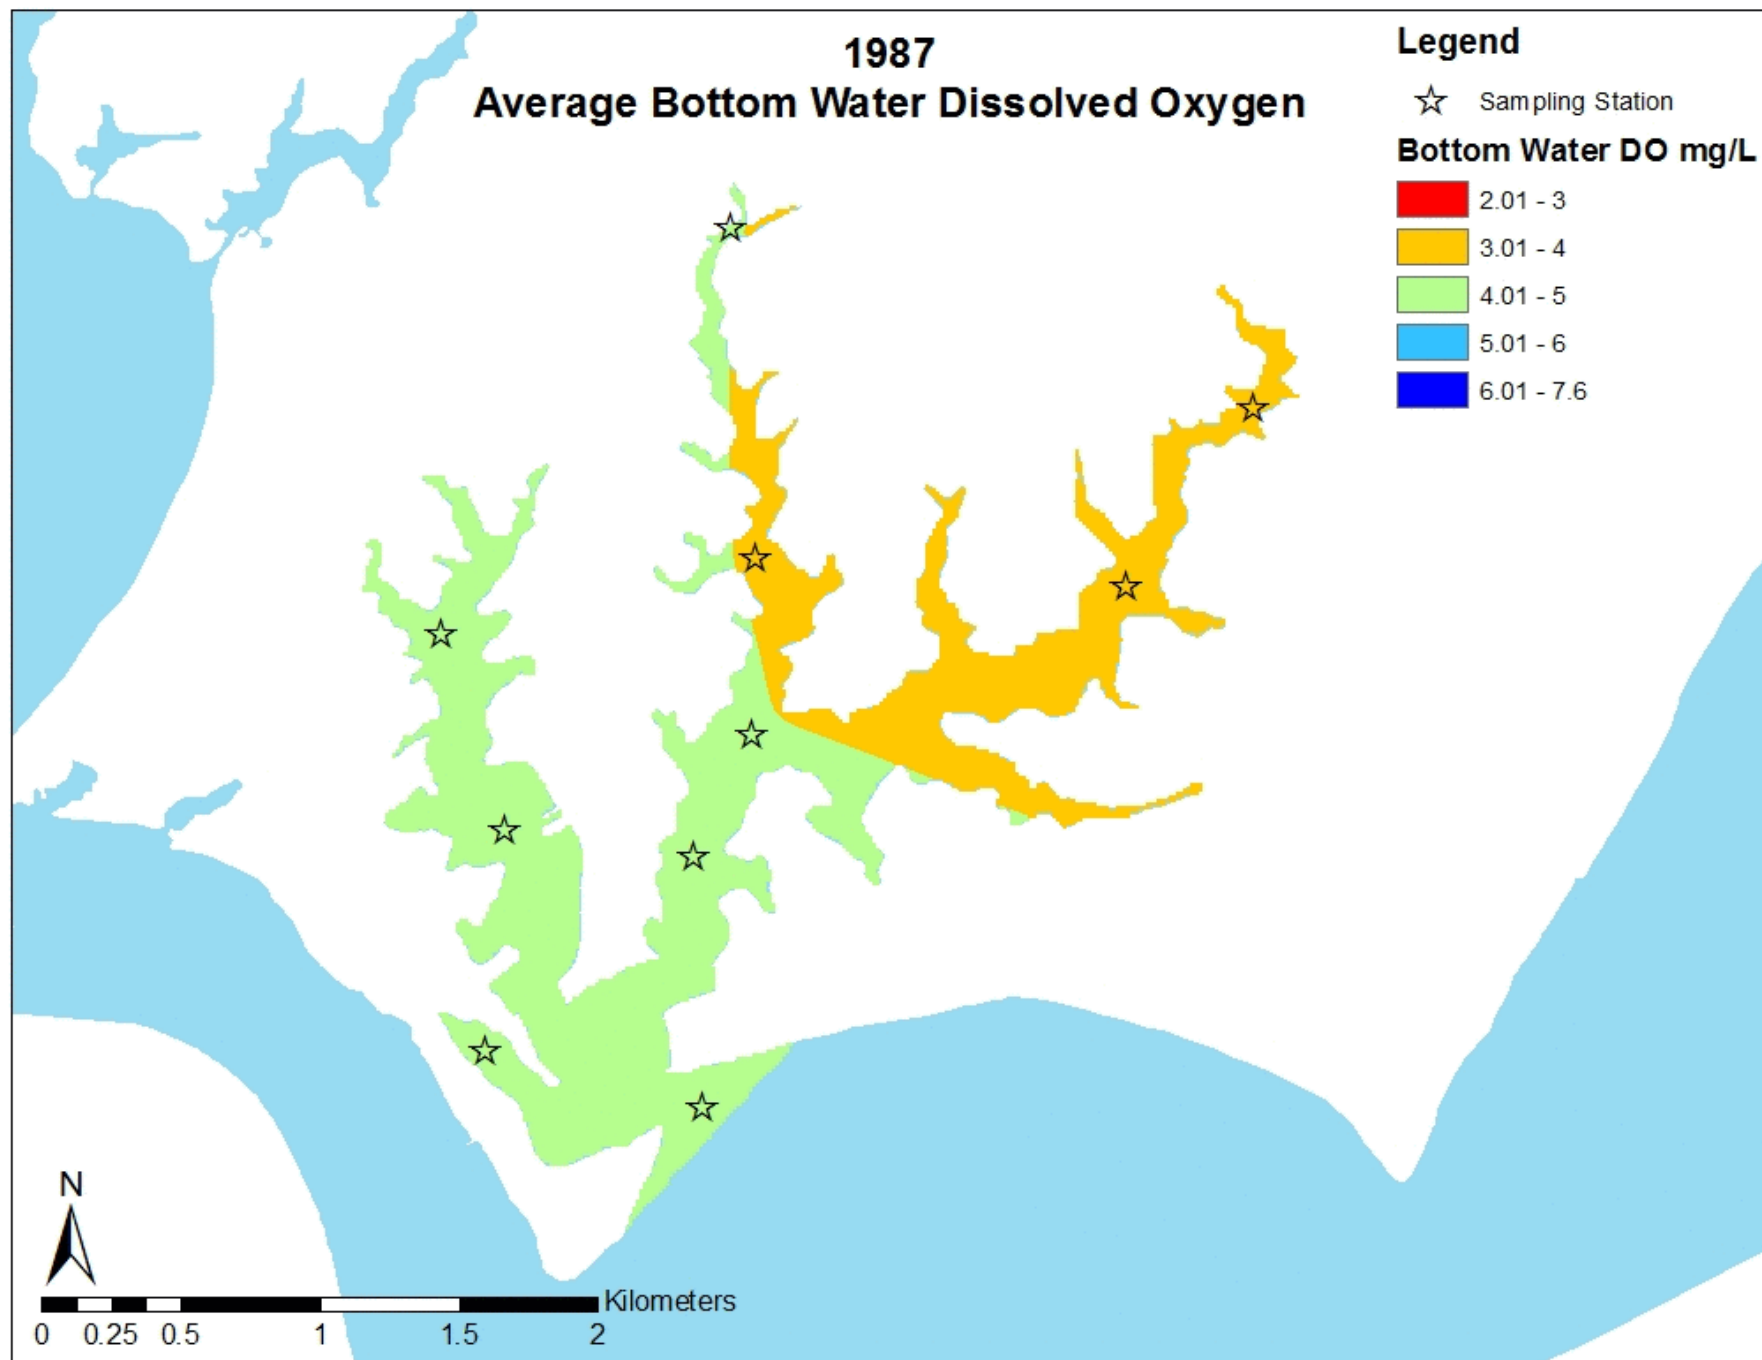

2.01 - 3

3.01 - 4

4.01 - 5

5.01 - 6

6.01 - 7.6

Recommendations

- Continue to monitor tidal creeks in Calvert County
 - *Negative and positive trends in water quality can be clearly documented*
 - *Measure effectiveness of implementing the Calvert Watershed Implementation Plan.*
- Encourage high frequency monitoring and other forms of assessments when the opportunity arises.
 - *We continue to look for useful collaborations in conducting this monitoring program*
- Implement the Calvert WIP to the maximum extent practicable
 - *Focus on practices and locations where the effectiveness will be greatest.*
- Continue to support planning and eventual implementation of:
 - *Sewer upgrades, BMPs, installation of enhanced nutrient removal (ENR) septic systems, riparian buffer zones, and encourage the use of pump-out facilities by boaters*
- Continue to support the local county and state environmental educational programs so the public can make informed decisions at the personal, local and regional levels.

Bay Restoration Grant Fund – FY 14 Calvert County Process

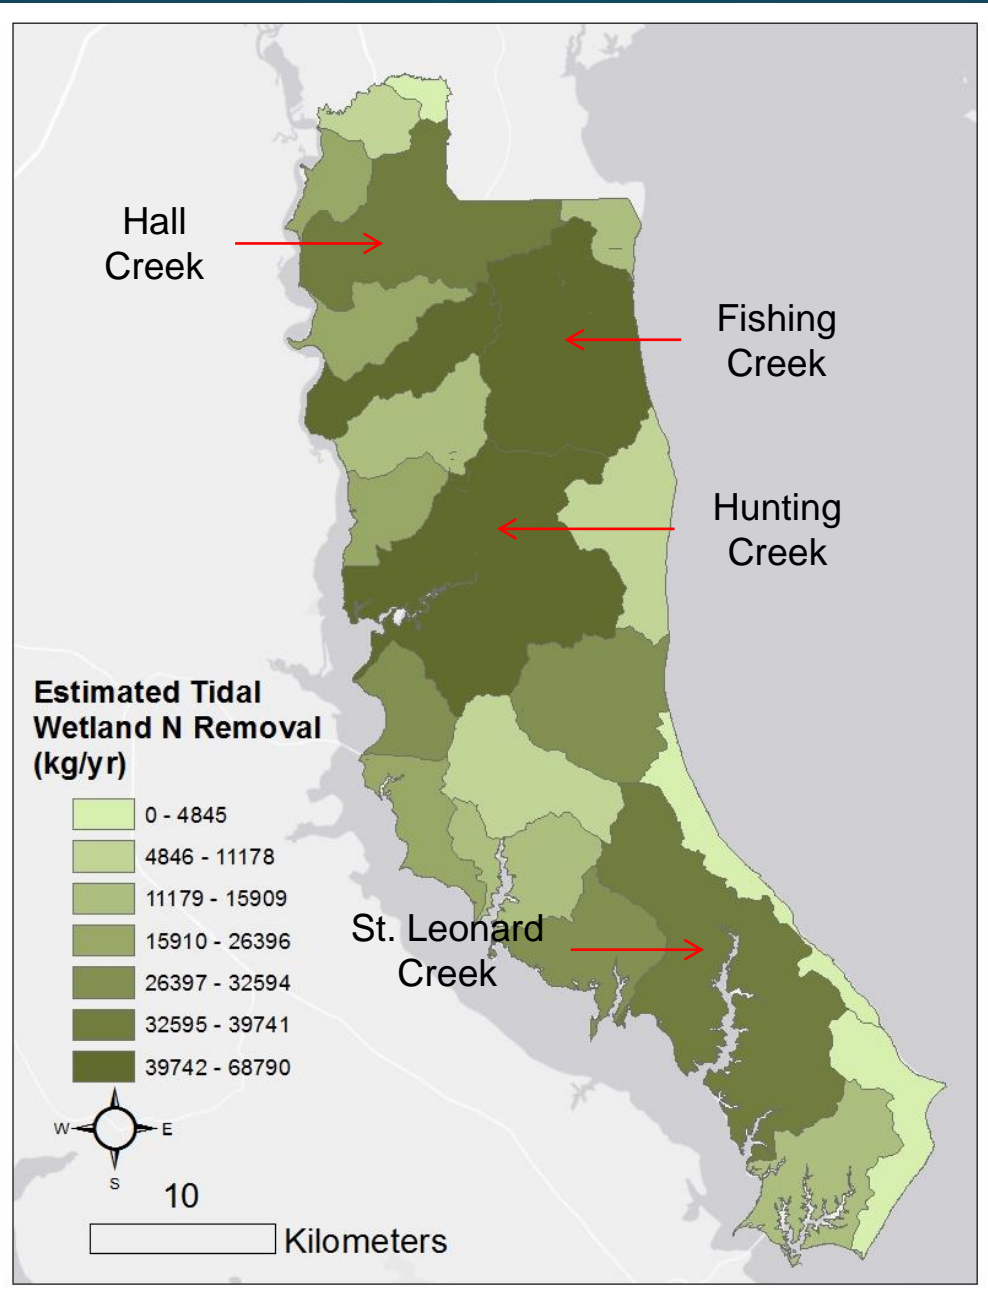

Property owner/applicant completes and signs the Bay Restoration Fund Grant Application form. The form is located here:
<http://www.co.cal.md.us/Index.aspx?nid=1402> or is available through the Department of Community Planning and Building (410)535-1600 x2336.
Applicant submits the form and a copy of his/her processed 2012 IRS Tax Form 1040 to:
Steve Kulien, BRF Grants Administrator,
Department of Community Planning and Building,
175 Main Street, Prince Frederick, MD 20678
Steve Kulien may be reached by calling: 410-535-1600 x2336 or via Email at: kulienst@co.cal.md.us

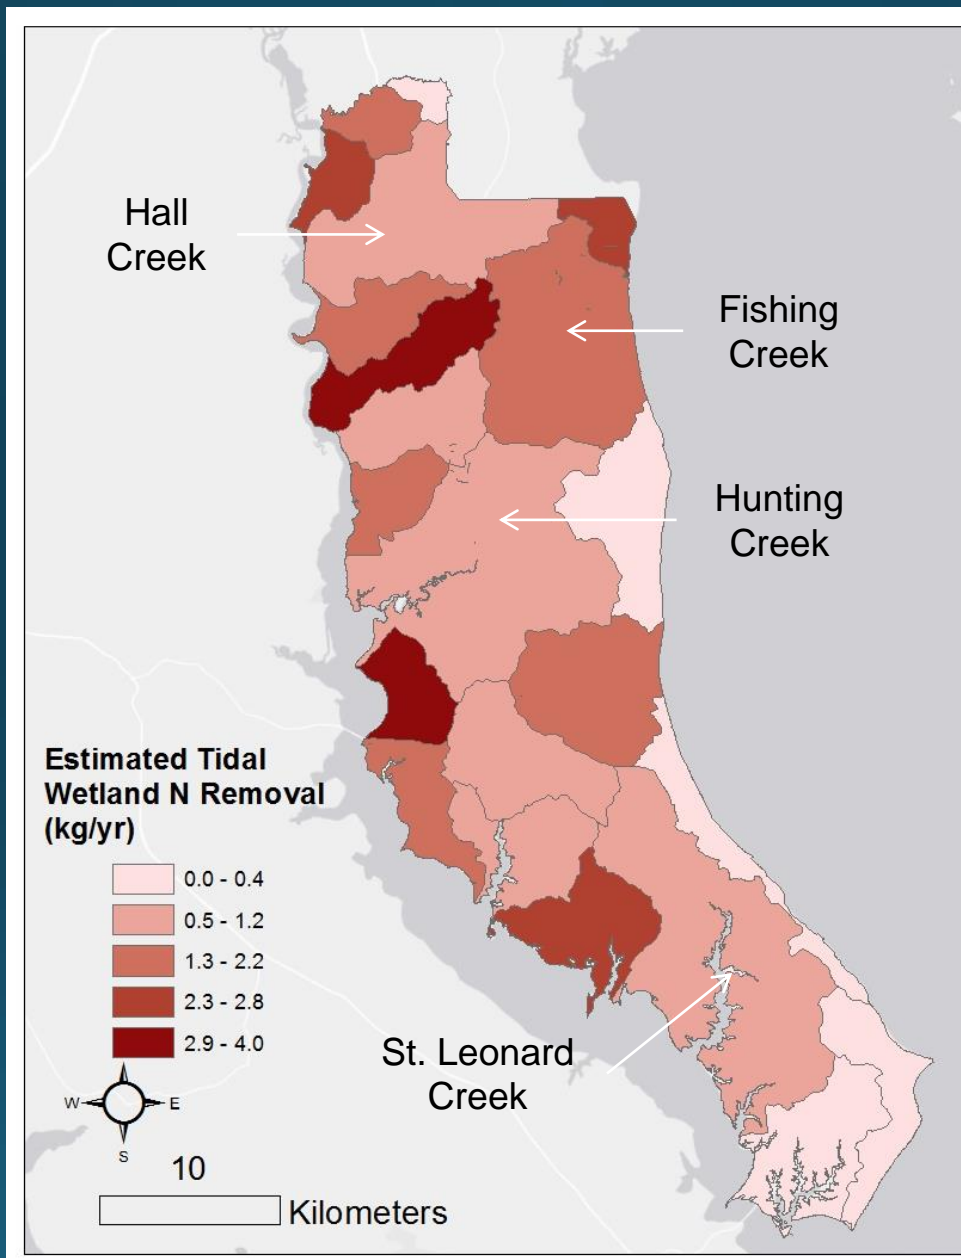

Determination of eligibility for the Bay Restoration Fund grant consideration is based upon the Maryland Department of the Environment
Guidelines which are adjusted by the State of Maryland each year based on grant funding available.
All property owners within the county are eligible for grant assistance but priority is given to properties with failed or failing septic systems as determined by the State Health Department of Calvert County (410)535-3922.
MDE guidelines are located here: <http://www.mde.state.md.us/PROGRAMS/WATER/BAYRESTORATIONFUND/ONSITEDISPOSALSYSTEMS/Pages/Water/cbwrf/Index.aspx>

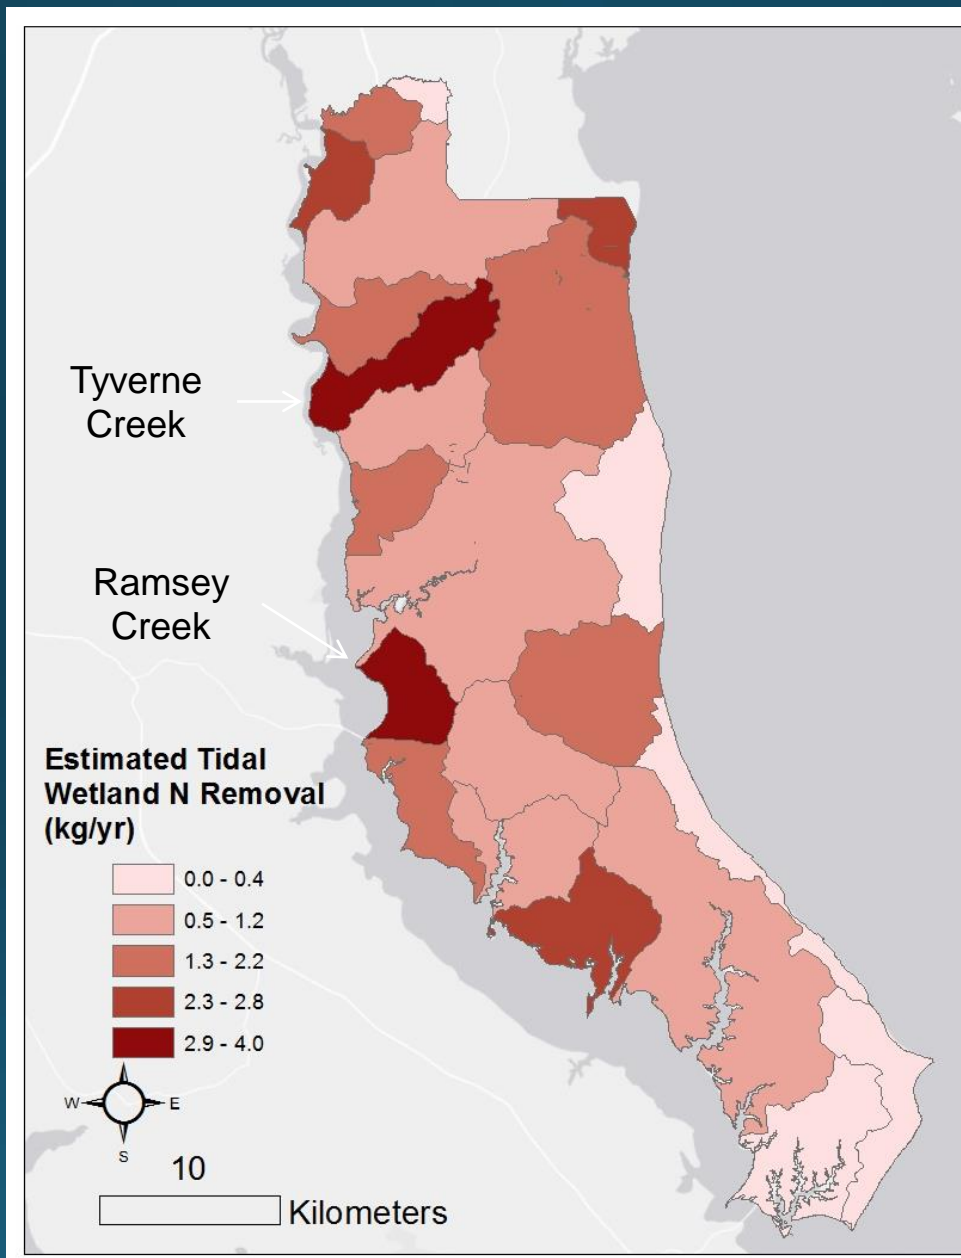

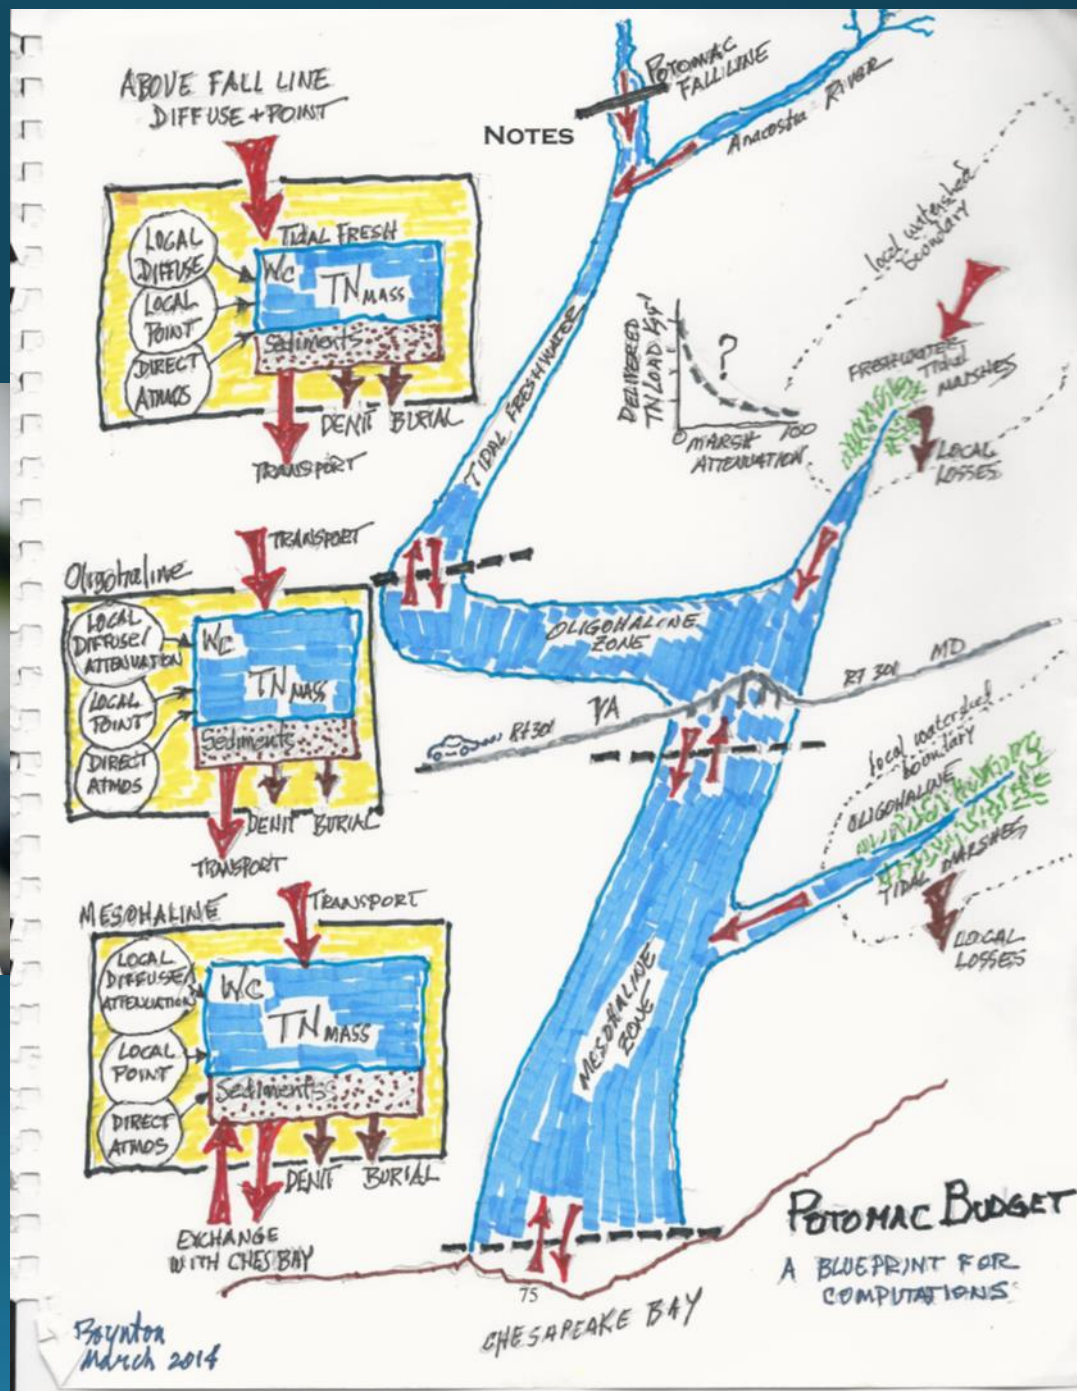

Wetland Category	Nitrogen Removal Services	Source
Denitrification (g N m ⁻² yr ⁻¹)		
Tidal Fresh	14.7	Greene 2005
Brackish	7.4	Kemp 2006
Salt	0.6	Thomas & Christian 2001
Nitrogen Burial (g N m ⁻² yr ⁻¹)		
Tidal Fresh	23.4	Merrill & Cornwell 2000
Brackish	13.6	Merrill & Cornwell 2000
Salt	4.3	Thomas & Christian 2001

Inputs, Losses, and Mass Balance

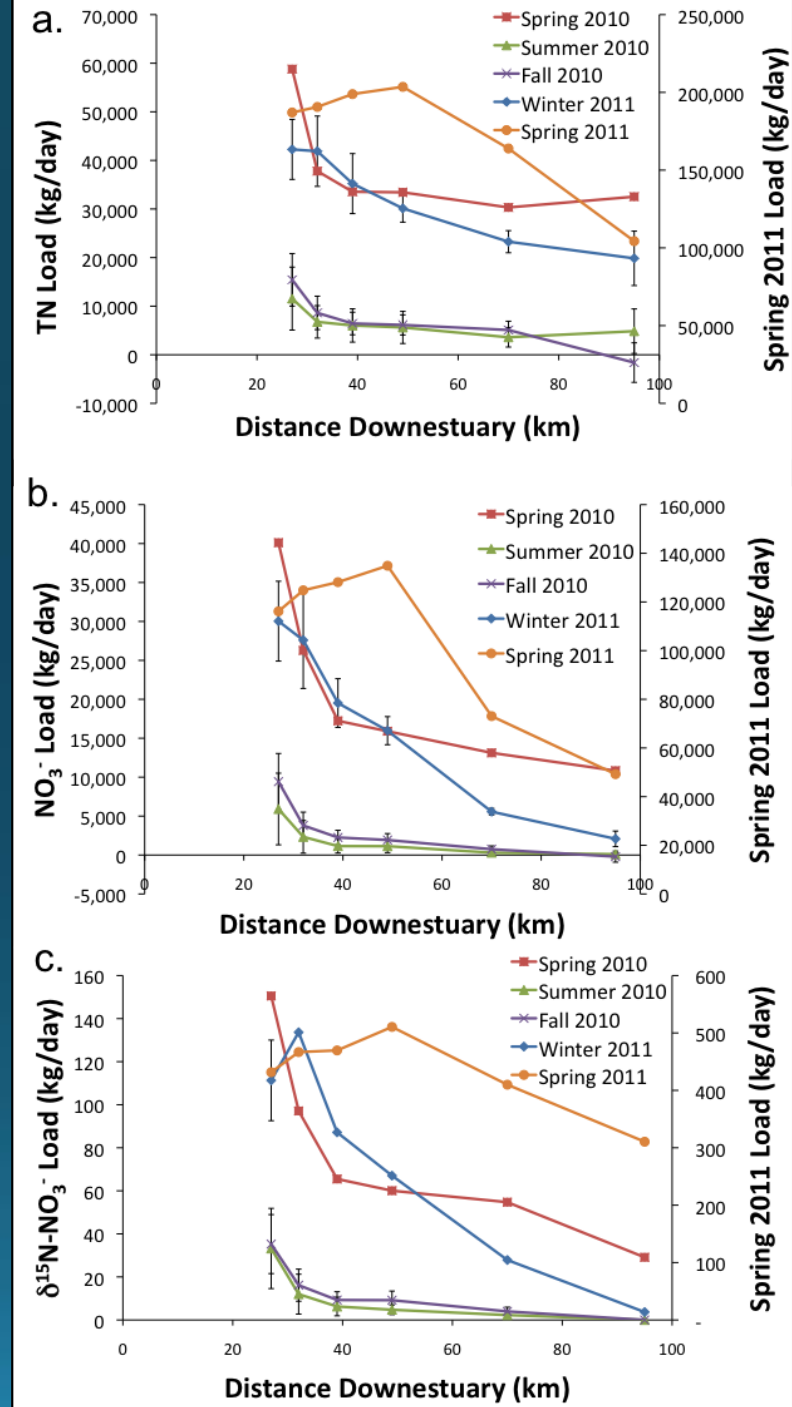

Source Tracking

Modeled N loads decreased down estuary.

Depending on the season, export of wastewater effluent to the Chesapeake Bay main stem characteristic of the Blue Plains treatment plant ranged from 1-30% of inputs.

Remineralization of N inputs was evident in changed ratio of δN_{15} and δO_{18} isotopes of nitrate.

Values estimated using this approach similar to direct flux measurements.

	Total Inputs (kg/day)	% of Inputs from Blue Plains*	Net Export (kg/day)	% of Blue Plains Inputs Exported
Winter	49,150 \pm 30,323	10 \pm 13	19,844 \pm 13,728	3.7 \pm NA
Spring	13,5317 \pm 14,614	8 \pm 0.8	68,431 \pm 48,060	71 \pm 20
Summer	13,888 \pm 596	38 \pm 3	4,853 \pm 8,326	19 \pm 11
Fall	15,334 \pm 3,700	47 \pm 13	-1,613 \pm 12,124	18 \pm 10

Trump's Budget Would Eliminate A Key Funder Of Research On Coastal Pollution

May 8, 2017 · 2:30 PM ET

Heard on *All Things Considered*

CHRISTOPHER JOYCE

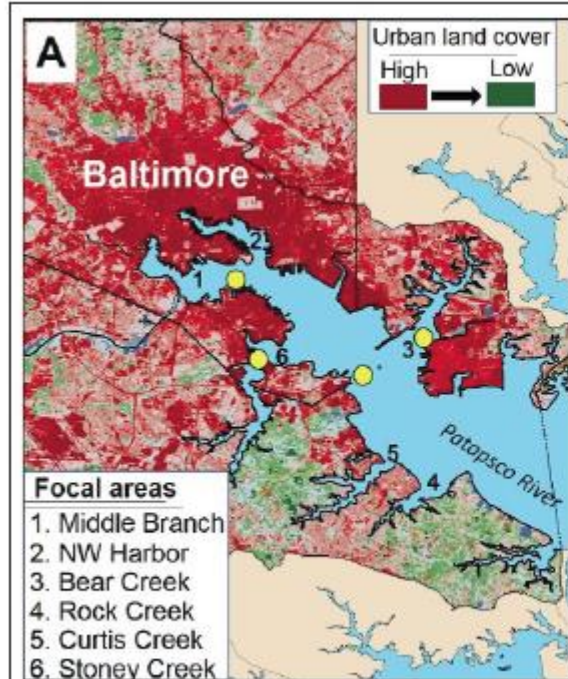

Figure 2. Proposed sampling zones (Focal areas 1-6) with watershed land cover differences in catchments and CBay Program monitoring sites (yellow symbols; A); hypothesized response of variables (left axes) over predicted stressor gradients (bottom axis) in the presence of stressors (orange line) and mitigators (green line; B).

ASPIRe

Active Societal Participation In Research And Education

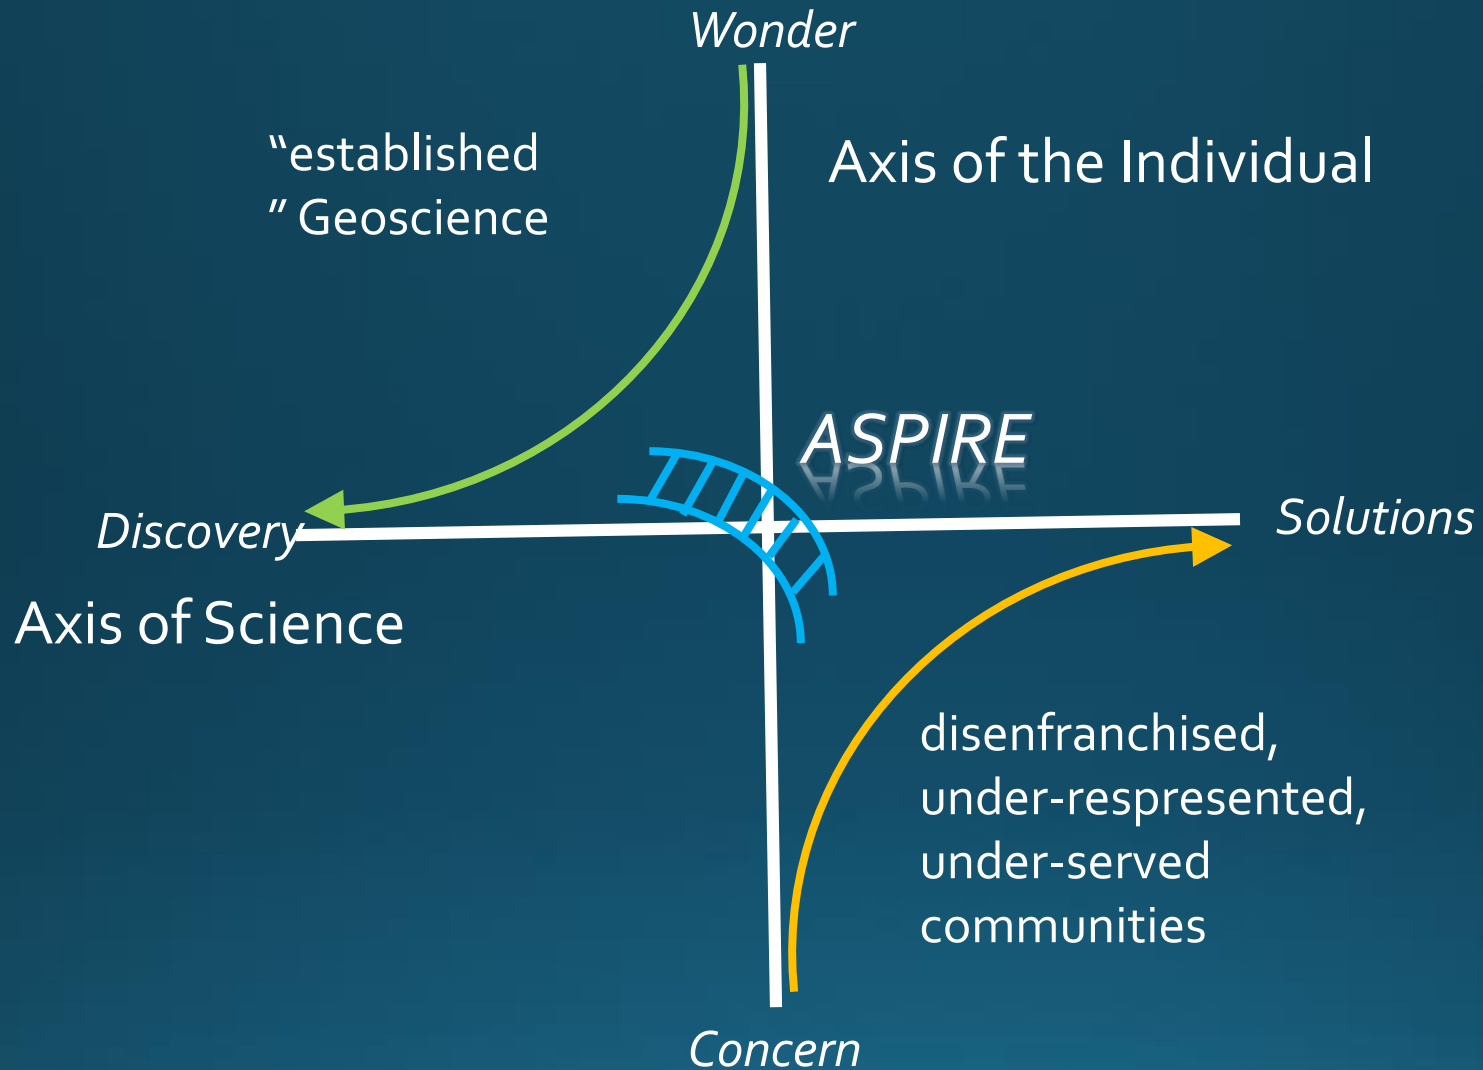

- Corey Garza - California State University Monterey Bay
- Lora Harris - University of Maryland CES
- Julia Parrish - University of Washington
- Julie Posselt - University of Southern California

ASPIRe aims to cultivate a generation of geoscientists with the leadership knowledge and skills, scholarship, and material support to reframe and rebrand the geosciences (Atmospheric, Earth, Ocean and Polar Science) as socially relevant and, thereby, to broaden participation in these fields.

The Consequences of Inclusion

From Julia Parrish

ASPIRE

- NCEAS working group model examines place based/participatory science as a vehicle for increasing diversity and leadership in the Geosciences.
- Examines how “gate openers” can bridge basic and applied science, characterizing leadership qualities.
- Employs mobile working groups, pilot effort focuses on developing best practices.
- Parallel workshops planned to develop leadership profiles and best practices
